Re: Cloverleaf vs. Pond Village Water Quality

A simple, straightforward solution:

The pipe that the Town of Truro is providing to bring fresh water to the occupants in the Cloverleaf Project to be extended to the west end of Pond Road with provision for the neighbors in Pond Village to tap into it so that the water quality for that neighborhood would no longer be in any way affected by Cloverleaf effluent and no longer be a health issue. This cost of this pipe extension to be included in the Cloverleaf Project.

Additionally: The Zoning Board of Appeals to recommend to the Select Board that the water quality standards for the Town be reexamined in light of the excellent 11 September report, “Private Wells and Truro Safe Water” prepared by the Docs for Truro.
